(a) SIMBA: placement sensitivity
Measured silicon
Resource-service bound
Isobar execution estimate
2.53× measured
2.40× estimate
Four-chiplet placements
adjacent
2 hops
corners
10 hops
Relative latency
Longest producer-consumer distance (hops)
(b) BookSim: layout selection
Search endpoints
12–31% lower
batch time
y = x
stacked fills
heuristics
random fills
search endpoints
Spearman ρ = 0.953, n = 13
Relative BookSim batch time
Relative analytical cost
